

Hilltop Commercial Heat Gun

Hilltop's commercial Heat Gun is a durable hot air gun for professional continuous operation. Used for numerous tasks thanks to the stable wings to keep it up right and hands free. This assists with the health and safety aspect when operating this heat gun.

The reflector nozzle that comes free with the heat gun directs hot air around the heat shrink/application for even heating to the surface area. Even heating means a better, more professional-looking end product and a more secure connection underneath, which is an all out win at the end of the day.

The hot air flow of a heat gun is less dangerous than a naked flame. One great advantage is that the heat is almost instantaneous so the heat gun can be switched off during pauses in the work while the flame blow-lamps have the inconvenience of needing to be relit if the flame is extinguished, This heat gun is lightweight, easy-to-use which makes it far less likely to scorch wood or crack glass when used correctly to strip paint and other applications.

IMPORTANT

Unlike other heat guns on the market this quality product has the added benefit of the air vents being on either side of the gun as opposed to the rear. This greatly improves performance and prolongs the life of the gun when used in the hands-free position this due to greatly improved ventilation to prevent overheating

Features

- 2 fan speed
- 2 heat settings
- Automatic shut off for safety
- Robust commercial heat gun
- Designed with 2 pieces of extendable fixing wings so it can be steadily fixed on the table for hands free use
- For use with dual wall and single wall tubing along with solder sleeve devices and moulded shapes.

The picture demonstrates how the Heat Gun can be used hands free by standing it up right on the table with its wings open. Operation of shrinking items down is far more efficient.

Included with the Heat Gun is its own reflector.
