

Hilltop Sleeve Expanders

(3 Pronged)

Sleeve expansion applicator tools.

Applications

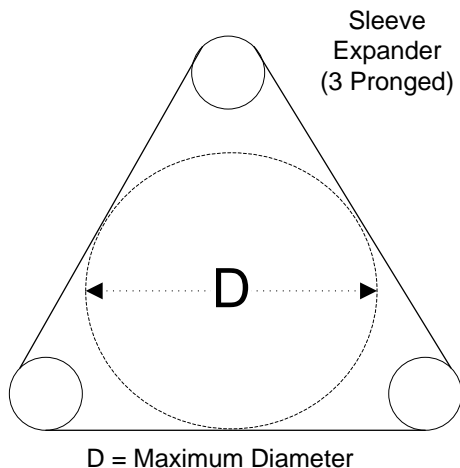

Hilltop's sleeve expanders ensure speed application of elastomeric markers and sleeves either before or after crimps or solder lugs have been applied.

There are two product types; a fixed prong applicator and an interchangeable prong applicator. There are four fixed prong applicators that will cover internal diameters (ID) from 1.2mm up to 25mm.

The D Kit contains a tool body and a range of interchangeable prongs to enable sleeves with IDs between 1.2mm and 11.5mm to be fitted as well as a 2 dram bottle of lubricant.

It is also possible for the tools to be used with thin walled elastomeric grommets if required.
