## HZ-100 - Heat shrinkable, low fire hazard flexible tubing

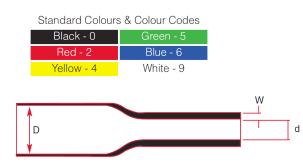

## **Features & Benefits**

- Low smoke emission
- •Shrink ratio 2:1
- Operating temperature -40°C to +105°C

## **Specifications**

Meets the flammability requirements UL224

The largest size which will recover snugly over the component to be covered should be ordered. The wall thickness of the tubing will be less than specified if recovery is restricted during shrinkage.O ther lengths, sizes and non-standard colours may be available subject to special orders.

## **Applications**

Hilltop's HZ-100 is a flexible thin walled heat-shrinkable tubing. The material contains no added halogens, exhibits excellent fire safety characteristics combined with low evolution of acid gases, whilst retaining good mechanical and fluid-resistant properties.

Uses include insulation and protection of cables, for lightweight harness jackets and electrical and electronic components used in enclosed spaces, such as marine, mass transit systems and offshore installations, or where equipment would be irreparably damaged by corrosive products of combustion.
